Country	Primary Petroleum Policy / Legal Framework	Policy Year (Validity)	Upstream Policy Strategy	Downstream Policy Strategy	Risk Management Framework	Policy Transferability to Cambodia
Saudi Arabia	Hydrocarbon Law & Saudi Vision 2030	2017 & 2016 (Current to 2026)	State monopoly via Saudi Aramco; Strict Maximum Sustainable Capacity (MSC) management.	Global refining expansion; Domestic retail prices linked to global benchmarks.	Supply: East-West Pipeline bypasses Hormuz. Financial: OPEC+ leadership stabilizes global revenue.	Strategic infrastructure investment and strong NOC governance are potentially transferable to Cambodia.
Canada	Provincial Royalty Frameworks & CER Act	2019 (Active Framework 2026)	Driven by private IOCs under strict provincial oversight; No national oil company.	Free-market pricing governed by federal clean fuel standards.	Financial: Alberta Heritage Savings Trust Fund manages price volatility. Supply: Trans Mountain (TMX) pipeline reduces reliance on US buyers.	A petroleum stabilization fund could help reduce fiscal volatility.
United States	Energy Policy Act & Inflation Reduction Act	2005 & 2022 (Active Framework 2026)	Decentralized private operation; Federal and state leasing structure.	Free-market liberalized pricing; Strict EPA fuel standards without subsidies.	Operational: BSEE/EPA strict offshore oversight. Supply: Strategic Petroleum Reserve (SPR) releases to combat inflation.	Maintaining a flexible, private-driven upstream sector while utilizing strategic reserves as a macroeconomic buffer.
Brazil	Petroleum Law & Pre-Salt PSA Law	1997 & 2010 (Active Framework 2026)	Petrobras dominant in deepwater; Clear unitization rules for shared reservoirs.	Mixed pricing with periodic state intervention; High biofuel blending mandates.	Operational: Extremely strict coastal HSE regulations (IBAMA). Financial: State intervention in Petrobras wholesale pricing.	Different fiscal regimes may be appropriate for conventional and strategically important petroleum resources.

Country	Primary Petroleum Policy / Legal Framework	Policy Year (Validity)	Upstream Policy Strategy	Downstream Policy Strategy	Risk Management Framework	Policy Transferability to Cambodia
China	Mineral Resources Law & 14th Five-Year Plan	1986 (Amended) & 2021 (Active)	NOCs (CNPC/Sinopec) have monopoly; Foreign entry mostly via JVs/PSCs.	NDRC imposes formula-based price ceilings to protect domestic consumers.	Supply: Pipeline diversification to avoid maritime chokepoints. Demand: Reduce dependence on petroleum through accelerated EV adoption and energy diversification.	Implementing dynamic retail price ceilings to protect domestic markets during global price shocks.
Russia	Law on Subsoil & Energy Strategy 2035	1992 & 2020 (Active Framework 2026)	State-backed NOCs (Rosneft) dominate; Maintain production capacity while optimizing state revenue.	Interventionist pricing; Complete export reorientation toward Asia.	Financial: "Damper Mechanism" subsidizes refineries to keep retail prices low. Supply: Alternative maritime logistics.	Ensuring fiscal policies secure immediate state revenues from resource extraction.
Iraq	Federal Refining Law & Draft Oil/Gas Law	2007 Draft (Operating Basis 2026)	Jurisdictional split (Federal vs KRG); Strict adherence to TSCs federally.	Heavy state subsidies; Inland storage prioritized for power generation.	Operational: High security protection investments required. Geopolitical: Vulnerability due to Federal vs KRG regulatory disputes.	Technical Service Contracts (TSCs) could be considered to maintain sovereign ownership over resources.
United Arab Emirates	UAE Energy Strategy 2050 & Concession Rules	2017 (Updated 2023, Active 2026)	ADNOC is mandatory majority partner (60%) in all major concessions.	Liberalized retail pricing; Export-focused refining sector.	Supply: ADCOP pipeline pumps oil directly to Fujairah, bypassing the Strait of Hormuz.	Mandating NOC participation in joint ventures ensures technology transfer and state oversight.
Kuwait	Law No. 6 of 1980 (KPC) & 2040 Strategy	1980 & 2021 (Active Framework 2026)	Absolute state monopoly; Foreign IOCs restricted to technical advice only.	Heavily subsidized domestic fuel and electricity; Euro V export standards.	Financial: Kuwait Investment Authority (KIA) sovereign wealth fund mitigates price drops. Geopolitical: High reliance on Strait of Hormuz.	Technical Service Agreements (TSAs) can facilitate technology acquisition without ceding equity.

Country	Primary Petroleum Policy / Legal Framework	Policy Year (Validity)	Upstream Policy Strategy	Downstream Policy Strategy	Risk Management Framework	Policy Transferability to Cambodia
Iran	Petroleum Act & IPC Framework	1987 & 2016 (Active Framework 2026)	NIOC absolute monopoly; production constrained by underinvestment and international sanctions.	Extensive domestic subsidies leading to high cross-border smuggling rates.	Financial: High exposure to sanctions and financial restrictions. Operational: Aging infrastructure limits HSE compliance.	Fuel subsidy reforms should balance affordability with fiscal sustainability.
Venezuela	Organic Hydrocarbons Law	2001 (Amended, Active 2026)	Mandatory PDVSA majority; production constrained by underinvestment and international sanctions.	Collapsed refining sector; Dual-market pricing (subsidized vs international).	HSE: Aging infrastructure and reduced refining capacity increase operational and environmental risks. Financial: Sovereign default and OFAC sanctions.	Macroeconomic stability is essential; rigid petroleum policies struggle if the underlying economy is unstable.
